

# 6 EMERGING RISKS FACING AGRIBUSINESS

1

## AGTECH

Drones, precision farming and robotic equipment enhance the productivity of traditional farming processes, but also create new types of risk.

2

## FOOD SAFETY

Foodborne illnesses quickly garner negative publicity and can damage reputations along the entire supply chain.

3

## CHEMICAL DRIFT

Wind drift or runoff exposes crops to potentially damaging substances like pesticides, herbicides and other chemicals.

4

## WEATHER EXPOSURES

Increasing frequency and severity of extreme weather patterns present a constant threat.

5

## CROP STORAGE

Crops with high moisture content can overheat and spontaneously combust in storage.

6

## AGRITAINMENT

Tourism, recreation, hayrides, pick-your-own and event hosting create new types of liability risks for farms, ranches and vineyards.
